BLUEBERRIES

For 1941 fall and 1942 spring gardens, thousands and thousands of them because we have been preparing for the crisis that is almost upon us. There is bound to be a food shortage in the near future; we must be ready to feed the whole of Europe before or after peace comes, and with our own man power under arms or in munition plants, those of us who stay at home must begin to grow things to take up the slack. This spring we shall be starting war gardens, and leaders in horticulture advise the growing of small fruits, as many as we can grow. The most dependable, steady croppers are the Blueberries; in 22 years we have never lost a crop.

So get your ground ready, preferably near your water supply, so that in hot dry weather they may be given a drink now and then to swell the berries and hasten the growth of new twigs. Blueberries like plenty of water.

Get your order in EARLY, and plant as many as you can; those who grow food are the safest in the land.

PRICES

2 yr. olds are \$2.75 or \$3.50 for 6 depending on size. \$5.50 for 10; \$6.00 per dozen.
